

IELTS Reading: Lesson 4

ARTICLE: Program Reduces Behavior Problems

Instructions:

- 1) Read the article below as fast as you can. Try to remember as much detail as possible without slowing down.
If it is too difficult remember this: "Don't worry, that is why you are taking this class. No one is an expert the first try."
 - 2) Read the article again slowly. Compare how much you understand this time.
 - 3) Read the article a third time, translate words you don't know and write them down. How is your understanding different?
-
- A. A home-based parenting programme to prevent childhood behaviour problems, which very unusually focuses on children when they are still toddlers and, in some cases, just 12 months old, has proven highly successful during its first public health trial.
 - B. The six-session programme involves providing carefully-prepared feedback to parents about how they can build on positive moments when playing and engaging with their child using video clips of everyday interactions, which are filmed by a health professional while visiting their home.
 - C. It was trialled with 300 families of children who had shown early signs of behaviour problems. Half of the families received the programme alongside routine healthcare support, while the other half received routine support alone. When assessed five months later, the children whose families had access to the video-feedback approach displayed significantly reduced behavioural problems compared with those whose families had not.
 - D. All of the children were aged just one or two: far younger than the age at which interventions for behaviour problems are normally available. The results suggest that providing tailored support for parents at this earlier stage, if their children show early signs of challenging behaviour -- such as very frequent or intense tantrums, or aggressive behaviour -- would significantly reduce the chances of those problems worsening.
 - E. Children with enduring behaviour problems often experience many other difficulties as they grow up: with physical and mental health, education, and relationships. Behaviour problems currently affect 5% to 10% of all children.
 - F. The trial -- one of the first ever 'real-world' tests of an intervention for challenging behaviours in children who are so young -- was carried out by health professionals at six NHS Trusts in England and funded by the National Institute for Health Research. It was part of a wider project called 'Healthy Start, Happy Start', which is testing the video-based approach, led by academics at the University of Cambridge and Imperial College London.
